Better food safety by getting results **sooner.**

When it comes to microorganism testing, traditional and rapid methods still don't meet the speed and ease-of-use demands of food and beverage processors. Companies need same-day results so product can be released quickly and environmental contamination can be averted or minimized. MicroSnap™ is the only test that addresses these needs with same-shift results from an easy-to-use test.

MicroSnap offers significant improvements over traditional and other methods by reducing time, costs, and improving usability. The tests detect a larger dynamic range than traditional tests, making it flexible for a variety of applications. With MicroSnap, companies receive results sooner, become more efficient, and most importantly, improve food safety.

Instructional Demonstration Video

	Traditional Methods	MicroSnap™
Rapid Results	-	+
Labor and Material Savings	-	+
Wide Dynamic Range*	-	+
Probability of Detection	-	+
Easy to Use	+	+
Easy Sample Prep	+	+
Sensitivity	+	+
Specificity	+	+
Quantitative Results	+	+

* MicroSnap range without sample dilution: 10-10,000 CFU.
Traditional: 15-300 CFU.

Rapid results **where** you need them most.

Raw Material Testing

Screen for microbiological contamination before materials go into processing.

- Prevent contaminated raw materials from entering production
- Avoid costly hold times that shorten raw material shelf life
- Prevent equipment down time and lost earning potential
- Quickly verify Certificates of Analysis on raw materials
- Move materials into production sooner to return investment faster

Plant Environmental Monitoring

Test environmental surfaces and equipment for same-day bacterial results of plant hygiene.

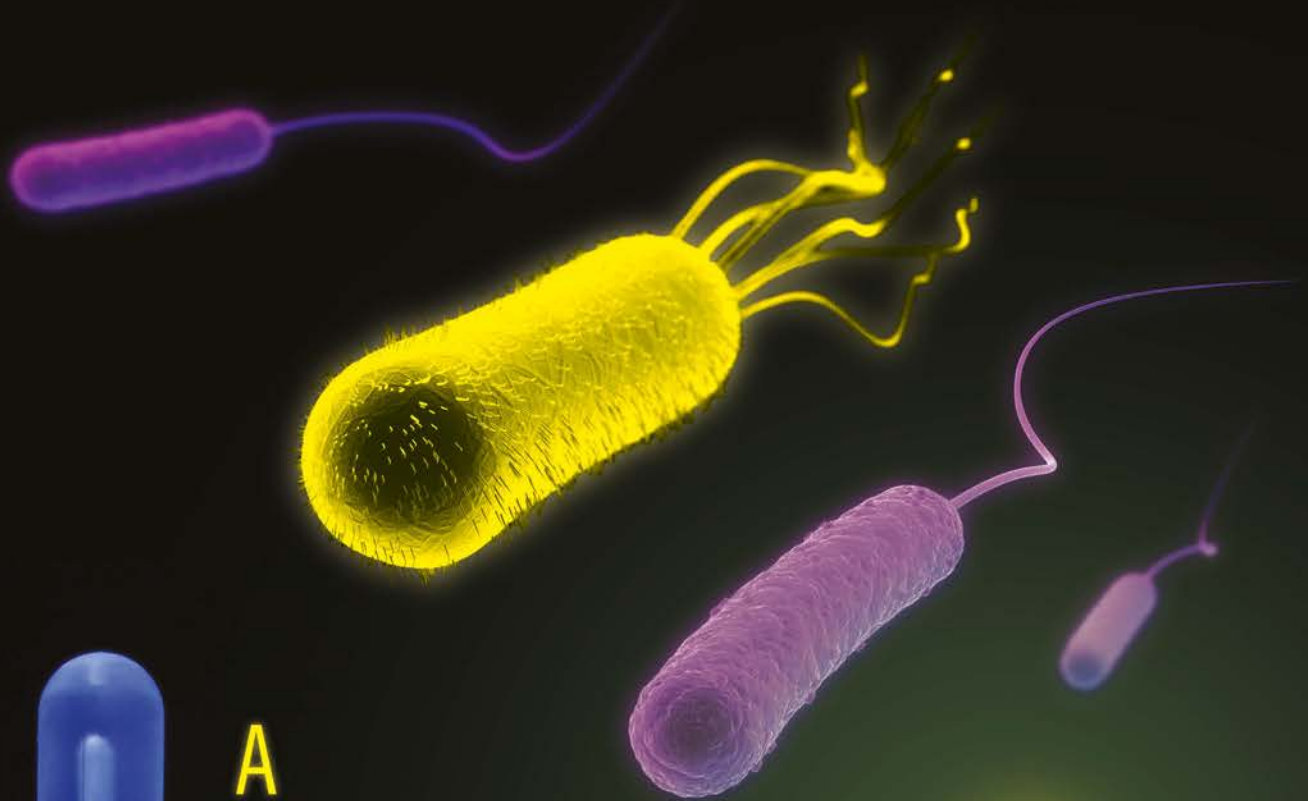

- Prevent environmental contamination from affecting several days of product
- Rapidly evaluate the effectiveness of cleaning and sanitation
- Show due diligence to auditors and customers
- Identify and troubleshoot problem areas in hours versus days
- Reduce outside laboratory costs by processing samples in-house

Finished Product Testing

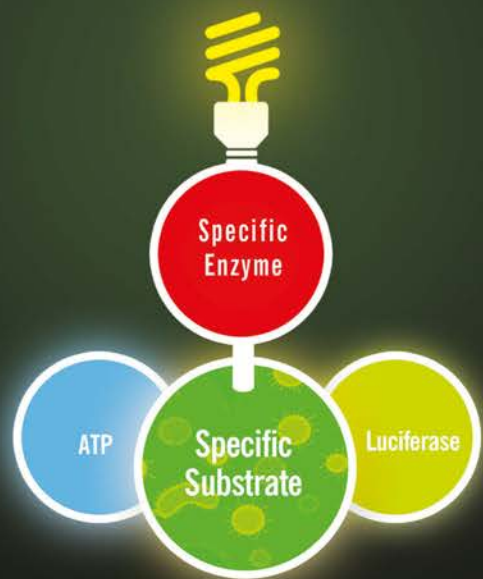

Verify microorganism levels sooner for quicker release and better quality assurance.

- Release time-sensitive products sooner
- React to contamination before product ships
- Prevent costly recalls
- Protect your brand name and reputation
- Test finished products in-house to cut outside laboratory costs

A new light on microbial detection.

MicroSnap is a rapid bioluminescent test method for the detection and enumeration of bacteria, giving actionable test results in less than 8 hours. The MicroSnap test platform consists of an Enrichment Device containing a specific growth medium and a Detection Device containing a bioluminescent (light-producing) substrate. When MicroSnap detects the specific microorganism, light is emitted and measured with Hygiena's EnSURE™ luminometer. Results are stored and tracked with Hygiena's complimentary SureTrend software for further data analysis and trending.

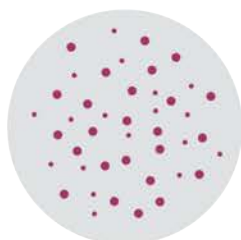

No more counting colonies.

CFU

Colony Forming Units

Traditional plating methods utilize colony counting techniques to determine CFU levels. MicroSnap technology derives equivalent CFU values using light detection.

RLU

Relative Light Units

EnSURE displays measurements in relative light units (RLU's). The RLU number is correlated to colony forming units (CFU's). Total, Coliform, and *E. coli* are AOAC-RI Performance TestedSM Methods.

CFU : RLU - Conversion

CFU/ml or swab*		<i>E. coli</i>	Coliform	Enterobacteriaceae**	Total
<10	↔	<2	<2	NA	<10
<20	↔	<4	<4	NA	<20
<50	↔	<7	<7	<10	<50
<100	↔	<12	<12	<20	<100
<200	↔	<20	<20	<40	<200
<500	↔	<35	<35	<100	<500
<1,000	↔	<60	<60	<200	<1,000
<5,000	↔	<180	<180	<1,000	<5,000
<10,000	↔	<300	<300	TNTC	TNTC

*Direct sample e.g., 1 mL liquid or surface swab. Dilution factors must be accounted for with product samples.

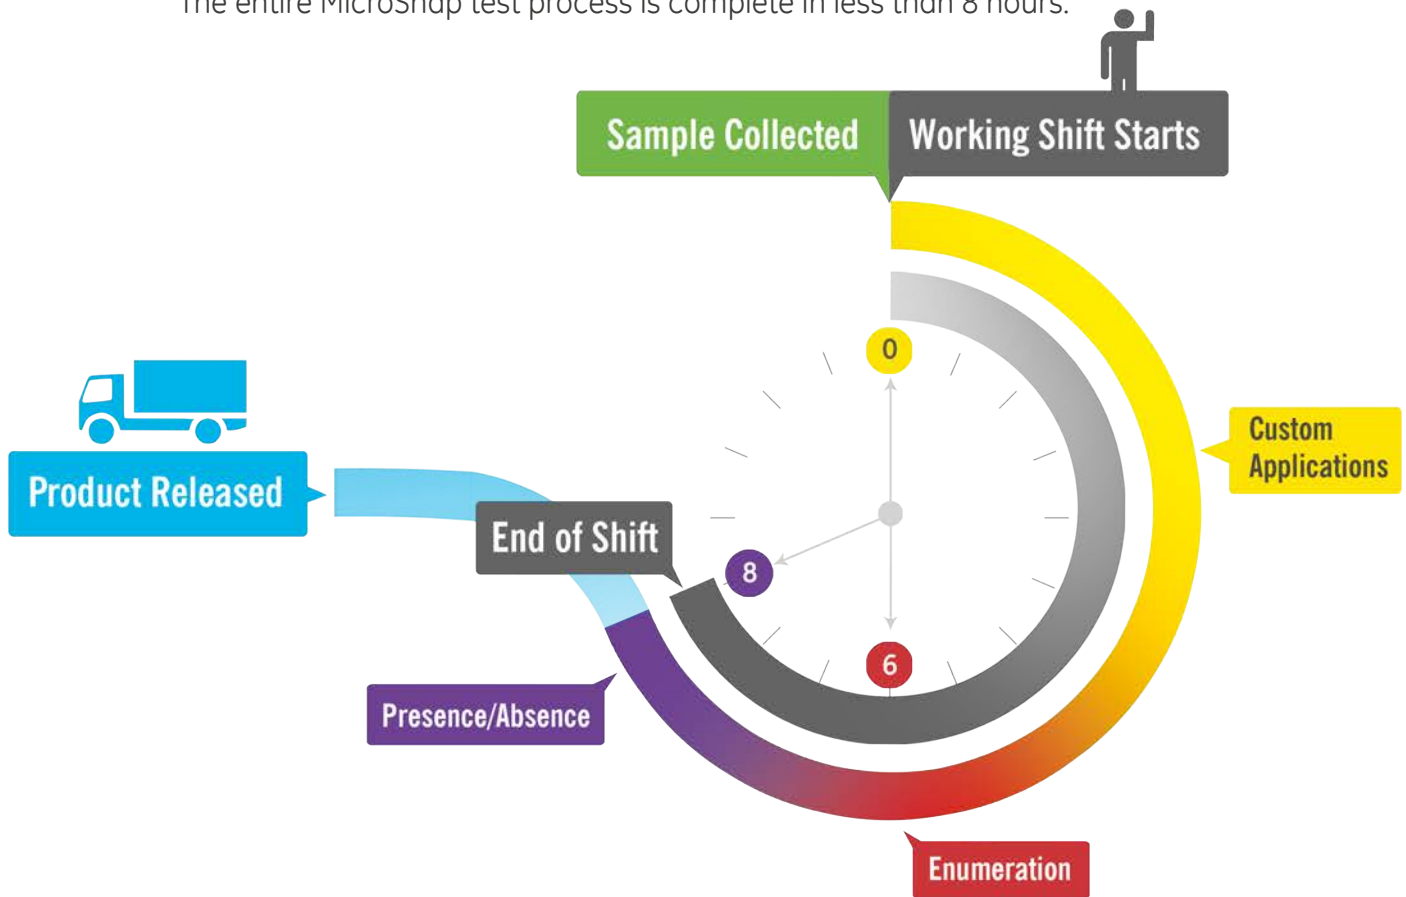

**Data reflects dynamic range after 6 hour incubation. See product instructions for more details.

Method Comparison : Time to Results

Same-shift **results.**

The entire MicroSnap test process is complete in less than 8 hours.

< 8 hours: **Presence/Absence**

Sample is collected and enriched at the beginning of the shift and incubated for up to 8 hours, depending on the test format.

6-7 hours: **Enumeration**

Sample is collected and enriched at the beginning of the shift and incubated for 6-7 hours, depending on the test format.

< 6 hours: **Custom Applications**

MicroSnap™ can deliver results even faster for applications with high detection limits. Contact us for customized instructions for your specific application.

Microbiology in a Snap

MicroSnap's efficient design makes microorganism testing easier than ever. Each device's patented **Snap-Valve** holds a precise amount of specific enrichment broth, ready to be used for either product or surface samples. Within the enrichment device is a **built-in pipette**, enabling convenient and efficient transfer of enriched sample to the detection device. After activation, the detection device delivers final results in ten minutes, making the total time to results **8 hours or less**. That means less time waiting for lab results or counting plates.

Additional Benefits

Reduce Materials

No serial dilutions to make.

Fewer replicates required.

Eliminate Lab Costs

Reduce lab fees.

No expensive overnight shipping.

Reduce Inventory Costs

Shorter product hold time.

Less inventory in warehouse.

Available Tests:

MicroSnap™ *E. coli*

Detection Times:

Enumeration - 6 hours
Presence/Absence - 8 hours

Instructional Video Online

Part No:

Enrichment Device - MS1-CEC
Enrichment Broth - MS1-CEC-BROTH-2ML
Enhanced Nutrient Broth - MS1-N-BROTH-9ML
Enhanced EB Broth - MS1-EB-BROTH-9ML
Detection Device - MS2-ECOLI

Detects:

E. coli

MicroSnap™ Coliform

Detection Times:

Enumeration - 6 hours
Presence/Absence - 8 hours

Instructional Video Online

Part No:

Enrichment Device - MS1-CEC
Enrichment Broth - MS1-CEC-BROTH-2ML
New! Enhanced Nutrient Broth - MS1-N-BROTH-9ML
New! Enhanced EB Broth - MS1-EB-BROTH-9ML
Detection Device - MS2-COLIFORM

Detects:

E. coli
Klebsiella
Citrobacter
Enterobacter

MicroSnap™ Enterobacteriaceae

Detection Times:

Enumeration - 6 - 7 hours
Presence/Absence - 8 hours

Instructional Video Online

Part No:

Enrichment Device - MS1-EB
New! Enhanced EB Broth - MS1-EB-BROTH-9ML
Detection Device - MS2-EB

Detects all species within the Enterobacteriaceae family including:

<i>E. coli</i>	<i>Serratia</i>
<i>Klebsiella</i>	<i>Shigella</i>
<i>Citrobacter</i>	<i>Salmonella</i>
<i>Enterobacter</i>	<i>Yersinia</i>

MicroSnap™ Total Viable Count

Detection Times:

Enumeration - 7 hours

Instructional Video Online

Part No:

Enrichment Device - MS1-TOTAL
Enhanced Nutrient Broth - MS1-N-BROTH-9ML
Detection Device - MS2-TOTAL

Detects Gram positive and Gram negative aerobic and facultative bacteria, including:

<i>E. coli</i>	<i>Staphylococcus</i>
<i>Listeria</i>	<i>Pseudomonas</i>
<i>Shigella</i>	
<i>Vibrio</i>	
<i>Bacillus</i>	

EnSURE™

One Instrument | Multiple Tests

EnSURE is a quality monitoring system that uses a single instrument to collect and analyze data from multiple quality tests. Using new state-of-the-art technology and patented designs, the EnSURE system is an easy-to-use, flexible, and accurate quality monitoring system for the entire line of MicroSnap products. In addition, EnSURE measures tests for surface, water, and high-sensitivity ATP, and specific enzymes.

System Details:

- Stores up to 5,000 locations, 200 User ID's, 100 test plans
- Runs on 2 AA batteries for several months of use
- Advanced photodiode sensor is stable and robust
- No required calibration or yearly maintenance
- PC compatible via USB
- Part No: ENSURE

Additional Tests:

UltraSnap™ : Surface ATP

UltraSnap™ is a user-friendly surface ATP test device with a pre-moistened swab bud for better recovery of test sample.

Part No: US2020

AquaSnap™ : Water ATP

AquaSnap™ detects the presence of ATP in liquid samples. This pen-sized test device accurately monitors biomass and organic residue in water or liquid samples. Part No: AQ100FX/AQ100X

SuperSnap™ : Allergen Prevention

SuperSnap™ is a high-sensitivity ATP test device for surfaces and also an effective tool to for the prevention of allergen cross contamination, or when dealing with difficult samples.

Part No: SUS3000

CrossCheck: Acid Phosphatase

CrossCheck measures acid phosphatase enzyme activity on finished products to verify thermal processing and on food contact surfaces to measure raw meat residue hazards.

Part No: CX-3000

ZymoSnap ALP: Alkaline Phosphatase

ZymoSnap ALP measures alkaline phosphatase enzyme activity in milk and dairy samples for 5-minute verification of pasteurization efficacy.

Part No: ZS-ALP-100

SureTrend™

Data Analysis Software

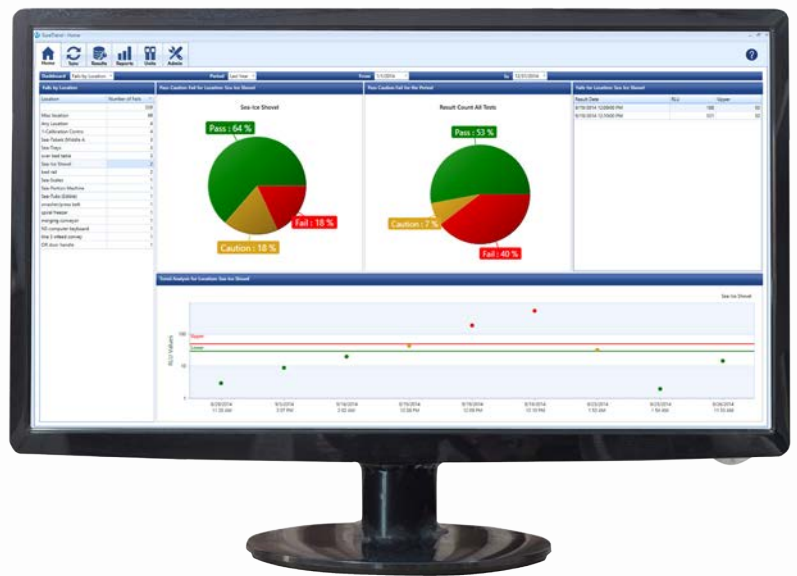

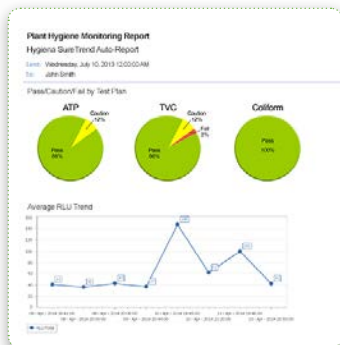

Pre-loaded Reports

Customizable and makes data analysis fast and easy.

Automated E-mails

Keeps you up to speed on facility hygiene levels.

The Dashboard

Puts important data right in front of you.
