

CAT. 9000900

# HALOES CALIPER

Simple, Precise, Easy  
Zone Reader

## Ordering Information

CAT. 9000900 HALOES CALIPER Optical instrument for measuring the inhibition zone.

## Product Overview

Making a precise inhibition zone measurement (100  $\mu$ m resolution) manually can become a challenge. The Haloes Caliper helps to perform this in a simple and precise fashion while avoiding parallax errors in readings. Pharmaceutical and clinical labs involved in inhibition zone measurements benefit from the use of this device. A precision rotating wheel accurately measures inhibition zones while being manually spun. This comes in handy during antibiotic susceptibility testing and antibiotic potency measurements.

## Workflow

## System Highlights

**High resolution:** The Haloes Caliper has a 100  $\mu$ m resolution.

**No parallax error:** The Haloes Caliper's exclusive screen-lense system avoids missing the ends of the haloes through its unique perpendicular reading technology.

**Clear display of results:** Results will be clearly featured in a digital display.

## Technical data

Magnification: Factor 2.25  
Measuring range: 0-35mm  
Resolution: 0.1mm  
Mains: 100/240V 50/60Hz  
Power: 15W  
Dimensions (WxDxH): 27x23x27cm / 10.6x9.0x10.6 in  
Weight: 3 kg / 6.6 lb
